ABOUT THE COMPANY:

Provectus Biofuels Inc. is a clean energy technology company incorporated in the Province of British Columbia. Our main focus is the development of renewable low-carbon gasoline (RLCG) derived from green hydrogen from electrolysis, gray hydrogen from steam methane reforming, forest pulp, logging slash, and mill waste. This type of fuel is known as eFuel. We plan to be one of the first suppliers of eFuel in North America. Provectus eFuel is 87 octane, drop-in ready, zero contaminants, zero sulfur with no blending required. Our RLCG has a Carbon Intensity score of 28 on the BC government Low Carbon Fuels Standard under the CleanBC Act. To achieve our objective, we have acquired an exclusive Canadian Development License for a unique and efficient patented process, and are working with world leading technology suppliers to develop the commercially proven technology.
